

Introducing the

YOUUniverse Health Cloud

Imagining what's beyond the EHR.

The YOUUniverse Health Cloud outperforms traditional EHR systems. Let's dive into the game-changing differences that set it apart.

First and foremost, the YOUUniverse Health Cloud is designed to make access to care better. It's purpose-built for the new value-based care model aligning seamlessly with the CMS Framework for Alternative Payments Model. This means that it's not just about treating illnesses – it's about delivering holistic care expansion across communities.

It's packed with tools to improve patient outcomes and overall well-being – while providing you all the practice flexibility you'll need to manage a complex integrated practice of the future.

Unlike traditional EHR systems, the YOUUniverse Health Cloud takes community integration to a whole new level. Operating on any device, it creates a fully digital enterprise that breaks free from the constraints of outdated EHR fee-for-service based processes.

But that's not all – the YOUUniverse Health Cloud goes beyond the basics with its comprehensive enterprise-class case management, digital engagement and clinical EMR models. The YOUUniverse Health Cloud caters to a wide range of care needs, from residential and intensive outpatient services to telehealth and online subscription-based learning. It's not just about treatment – it's about embracing wellness in all its forms.

What sets the YOUUniverse Health Cloud apart is its community population management capabilities, extending its reach to patients, in new channels like correctional and parole facilities, schools, adolescents, adults, seniors, as well as charitable and faith-based organizations. It's a truly integrated approach to healthcare no matter the discipline – as a team.

And the best part? The YOUUniverse Health Cloud is designed to work seamlessly with Medicaid, Medicare, and self-pay options, ensuring that everyone has access to the care they deserve. Its cross-community integrated behavioral model creates a supportive network that transcends boundaries, making wellness a universal goal.

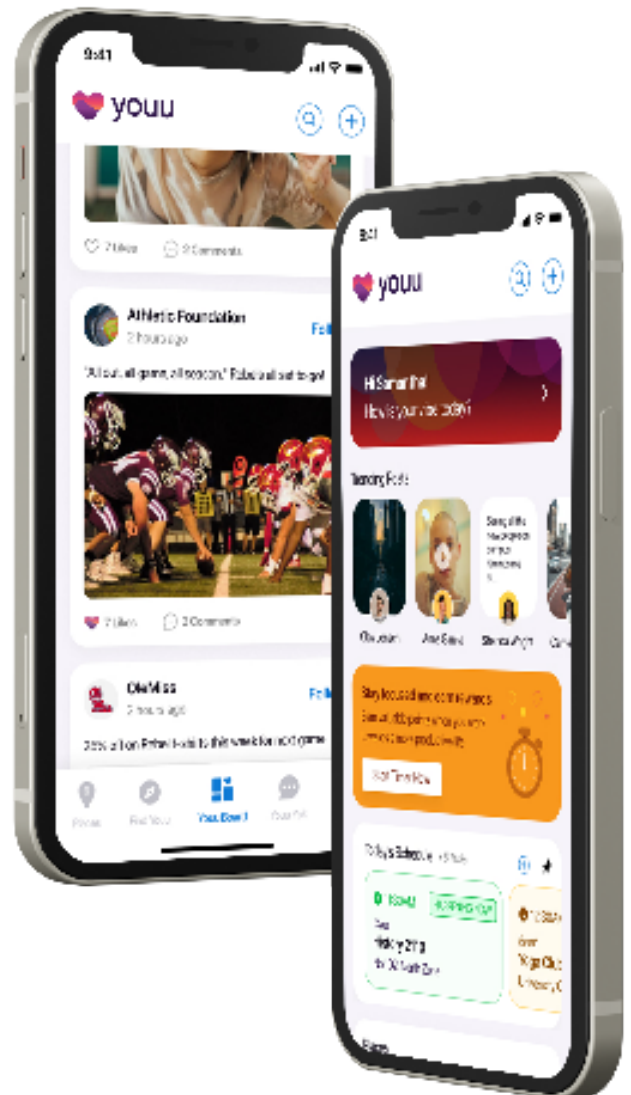

The BIG Three. Traditional EHR's aren't enough anymore

According to a recent Stanford Medical School survey, 92% of practitioners feel the traditional EHR hasn't kept pace with today's health practice needs. Hence, the YOUUniverse EHR (vs. the old EHR) operates in a multi-mode workflow with clinical, subclinical, and case management that can be easily integrated across real-time interoperable care teams – whether those teams are in your network, or not. It works with a no-wrong-door access-to-care approach that's perfect for physical health, behavioral health and community service group integration.

Here's how YOUUniverse is reimagining the traditional Big Three EHR modules:

1. Electronic Health Records (EHR),

Clinical record-keeping in the healthcare industry has revolutionized the way healthcare providers operate but also created a burden on most practices. By digitizing a patient's medical history, treatment plans, diagnostic reports, and other relevant information, EHR integrates all aspects of a patient's healthcare journey into one electronic platform. This integration streamlines administrative tasks, enhances communication between healthcare providers, and ultimately improves overall patient care and outcomes. With the power of EHR, healthcare professionals can securely store, access, and share patient information in a digital format through the YOUUniverse Health Platform. This technology-driven solution enables seamless collaboration among healthcare teams as they can easily access comprehensive patient histories, lab results, medication records, and more. This not only saves valuable time but also ensures accurate and up-to-date information, leading to better-informed decisions and improved patient care. Bid farewell to traditional paper-based medical records and embrace the efficiency and effectiveness of EHRs.

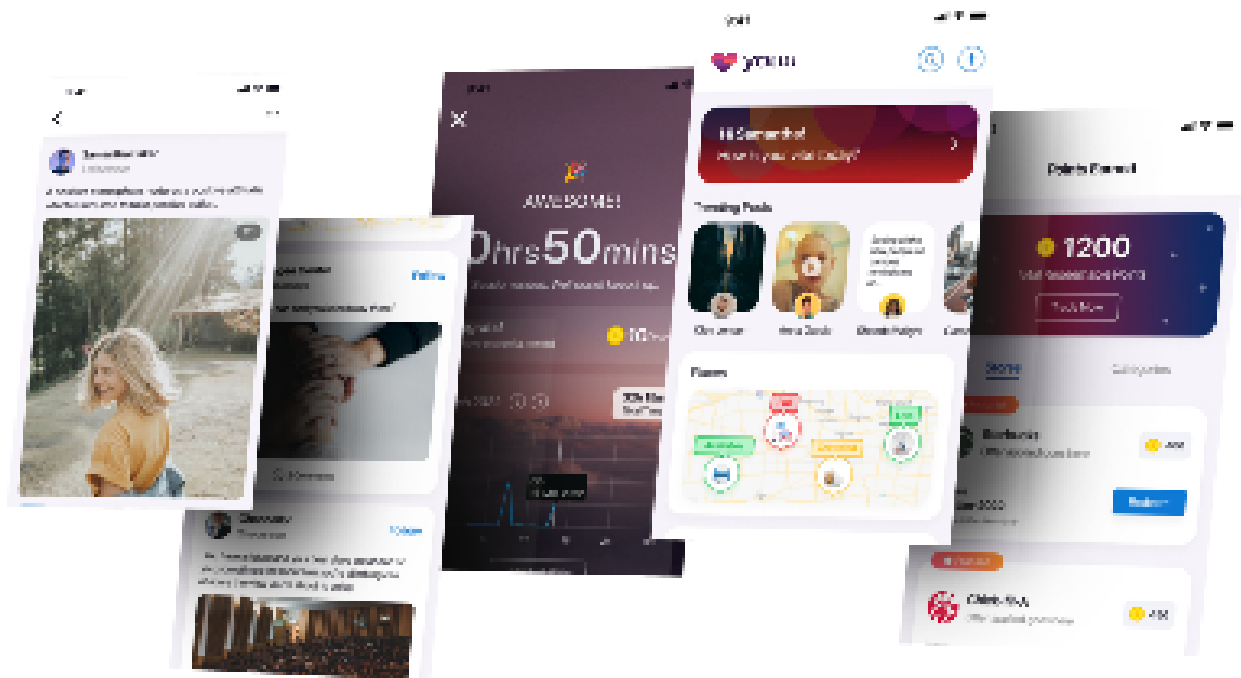

2. Billing and revenue cycle management

Built under a traditional fee-for-service payment model, this feature handles the billing, coding, and reimbursement processes to ensure accurate and timely payment for services rendered. The YOUUniverse encompasses activities like claims submission, denial management, and patient billing. With the ever-evolving healthcare landscape, this feature helps healthcare organizations navigate and optimize their revenue cycle in a fee-for-service environment, ensuring financial stability and operational efficiency.

3. Client Relationship Management (CRM)

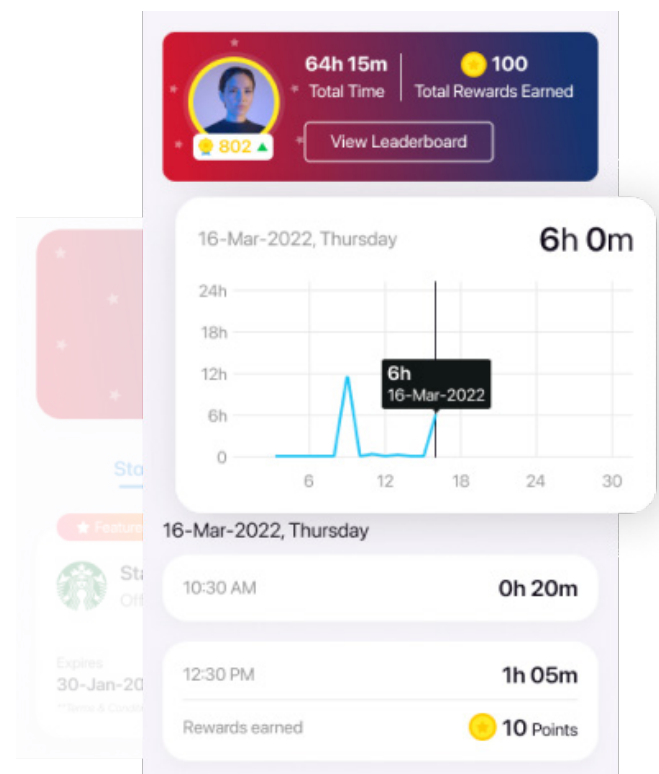

Enhancing patient engagement and improve access to healthcare organizations is especially important to a growing practice. By leveraging CRM, healthcare providers can establish and maintain strong relationships with their patients, ensuring that they receive personalized care and support. This technology enables healthcare organizations to streamline communication, provide timely and relevant information, and facilitate seamless interactions between patients and providers. As a result, the YOUUniverse empowers patients to actively participate in their healthcare journey, while also enabling healthcare organizations to efficiently manage patient data and enhance overall healthcare delivery.

Now, let's experience the health cloud

These 15 new capabilities will change how you approach care

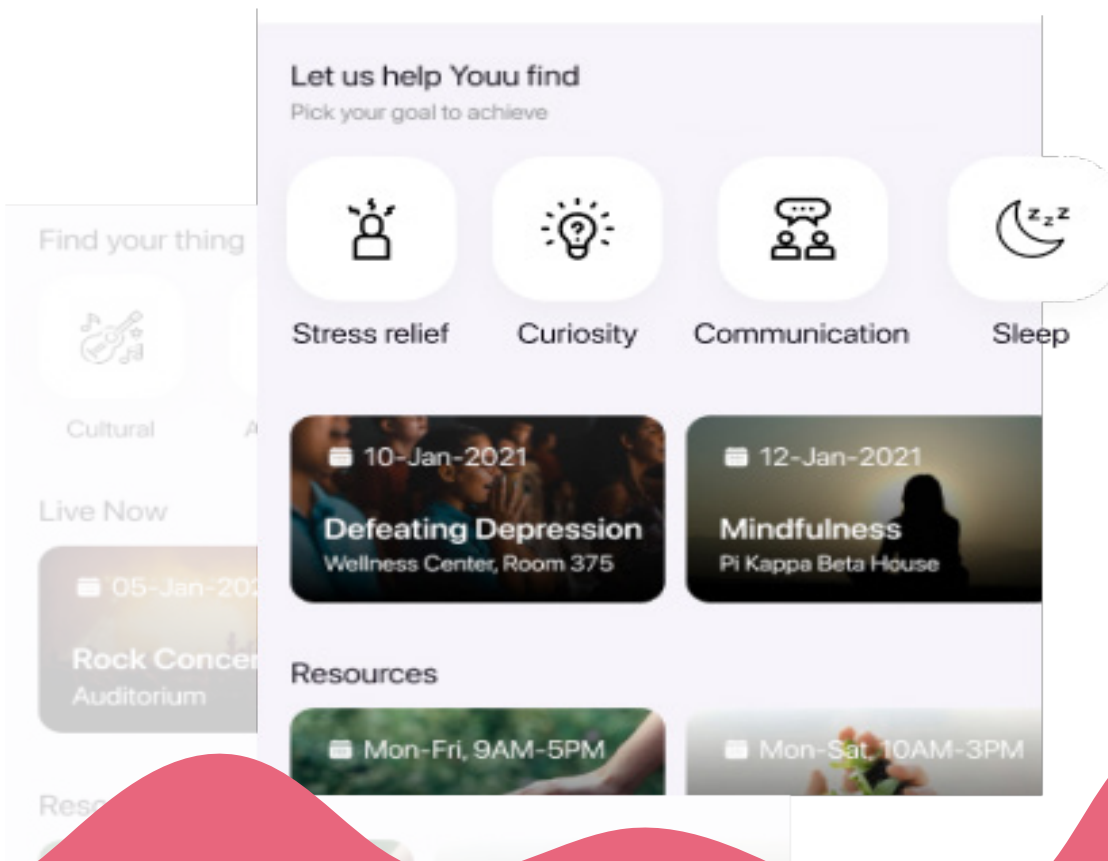

- 1. 9-Way AI.** With over 5 million hours of development, the YOUUniverse's 9-Way AI is a cutting-edge technology that harnesses the power of AI. It facilitates value-based decision-making for individuals, healthcare workers, and other stakeholders. By enabling the seamless sharing of information between these parties, 9-Way AI offers insights and recommendations to aid in making informed choices about treatment plans, patient progress and outcomes, cost considerations, inconsistencies in patient observations and much more. Whether it's assisting individuals in making personal decisions or supporting clinical documentation, 9-Way AI ensures that all stakeholders have access to the necessary information to make value-driven decisions and saving you hundreds of hours in time you can redirect to care – or dinner with your family.
- 2. Digital communities greatly expands access.** It features a dynamic platform that brings together online forums, social networks, and various stakeholders, including individuals and healthcare workers, to foster a collaborative environment for sharing valuable information. This feature provides a space where users can engage in meaningful discussions, exchange insights, and contribute to the collective knowledge base. By facilitating the exchange of information, digital communities empower individuals and healthcare professionals alike to stay aligned, connect with like-minded peers, and ultimately enhance their access to care.
- 3. Remote patient monitoring** is a cutting-edge feature that utilizes edge devices to monitor and track a patient's health remotely. This technology enables you to stay connected with patients, even when they are not physically present. By utilizing edge devices, such as wearable sensors and smart monitors, patients can have their vital signs, activity levels, and other health-related data continuously monitored and transmitted to healthcare providers. The platform allows to protect high-risk clients, like justice-involved offenders, with geo-tracking to maintain compliance or protect them from dangerous or negative behavior. The YOUUniverse maximizes flexibility for timely intervention and personalized care, ultimately improving patient outcomes and overall healthcare management.

- 4. Interoperable Care Teams** revolutionize healthcare by promoting collaborative care where skilled teams in different healthcare settings work together seamlessly to observe and implement personalized care strategies with patients. This innovative approach breaks down silos and facilitates the sharing of vital patient information, enabling healthcare professionals to provide comprehensive and coordinated care, resulting in improved patient outcomes and enhanced overall healthcare delivery.
- 5. Therapeutic Alliance Monitoring** is a cutting-edge analytics assessment that offers continuous monitoring and evaluation of the patient/provider relationship. This feature utilizes advanced analytics to provide real-time insights into the dynamics of the therapeutic alliance. By measuring and analyzing key indicators, it enables healthcare providers to assess the strength of the relationship, identify areas for improvement, and tailor their approach to meet the unique needs of each patient. With Therapeutic Alliance Monitoring, healthcare professionals can optimize the therapeutic alliance, leading to enhanced patient satisfaction and improved treatment outcomes.
- 6. Longitudinal Patient Outcomes** is a feature that enables healthcare providers to assess and measure the changes in a patient's health status, experiences, and outcomes over an extended period of time. By tracking and analyzing data collected from multiple points throughout a patient's journey, this feature provides valuable insights into the effectiveness of treatments, interventions, and overall healthcare strategies. This "time-travel" longitudinal approach allows for a comprehensive understanding of how a patient's health evolves over time, leading to more informed decision-making and improved patient outcomes.

- 7. Population Management** refers to the process of analyzing and addressing the distribution of health outcomes within a population, while also examining the various factors that contribute to these outcomes. It involves understanding the disparities in healthcare access, identifying social determinants of health, and implementing strategies to improve overall population health. By focusing on the distribution of health outcomes and the influencing factors, Population Management aims to create a more equitable and effective healthcare system that benefits all individuals within a population.
- 8. Patient Risk Underwriting** is a unique AI machine-learning feature that assesses the potential risks involved in providing medical care to either an individual or a group of individuals. It involves a comprehensive evaluation process that analyzes various factors, such as medical history, current health conditions, lifestyle choices, and potential complications. By thoroughly assessing these risks, healthcare providers can make informed decisions regarding the level of care and resources needed, ensuring the safety and well-being of the patients. This feature plays an important role in maintaining a balance between providing quality care and minimizing potential risks for both the patients and the healthcare providers.
- 9. Value-Based Cost Accounting** is a powerful tool that evaluates and examines the expenses associated with providing healthcare services, all while taking into account the value and outcomes achieved for patients. By incorporating this approach, healthcare providers can gain a deeper understanding of the costs involved in delivering care, as well as the impact and effectiveness of their treatments and interventions. VBC Cost Accounting is designed for payer integrated Smart Contracts eliminating the need for fee-for-service billing. Healthcare organizations can now make informed decisions, capitate or bundle payment schemes and allocate resources more efficiently, ultimately leading to improved patient outcomes and a more cost-effective healthcare system.

10. Alternative Payment Models (APMs) is a framework developed by CMS (Centers for Medicare Services) to enhance the quality and efficiency of healthcare delivery, while also effectively managing costs. The YOUUniverse supports all CAT 1-4 alternative payment models. This innovative approach enables a complete transition from the traditional Fee-for-Service payment model, allowing healthcare providers to explore new avenues that prioritize patient outcomes and promote value-based care. By incentivizing providers to focus on delivering high-quality healthcare rather than the quantity of services provided, APMs pave the way for a more sustainable and patient-centered healthcare system.

11. Payer/Provider Integrated Navigation is a feature that enables seamless collaboration between healthcare payers and providers, aiming to enhance the navigation, coordination and delivery of services for all individuals within a community. By integrating the efforts of both payers and providers, this feature ensures comprehensive collaboration, leading to improved healthcare outcomes and a more efficient healthcare system. Through this integrated navigation, the community members can expect enhanced communication, streamlined processes, and a more personalized approach to their healthcare needs.

12. Digital Patient and Advisor Connectivity is a feature that allows patients and advisors to easily communicate, exchange information, and collaborate with each other through any digital device (web, iOS and Android). This technology enables seamless interaction between patients and their advisors, promoting effective communication and the sharing of valuable information. By facilitating this connectivity, patients can receive timely guidance and support, while advisors can provide personalized care and monitor their patients' progress. This feature revolutionizes the way patients and advisors interact, enhancing the overall healthcare experience and improving patient outcomes.

13. Interactive Auditing is a powerful feature that ensures the accuracy and appropriateness of medical services provided. Additionally, the feature promotes alignment of incentives for provider excellence by incentivizing high-quality care, which encourages healthcare professionals to consistently deliver exceptional services. Through its real-time interaction, this auditing tool not only safeguards patient well-being but also supports providers in delivering optimal care.

14. The Value-Base Clearinghouse is a cutting-edge platform that leverages Smart Contracts to streamline the processing and submission of value-based medical claims to payers. With a focus on bundled and capitated payment contracts, this innovative feature ensures efficient and accurate transaction processing, eliminating the need for manual intervention. By automating the entire claims submission process, healthcare providers can seamlessly navigate complex payment systems, resulting in improved financial outcomes and enhanced patient care.

15. Interoperable Community Care Team Management is a feature that facilitates the collaboration and coordination of care for patients or groups of patients by promoting cross-discipline community care teams. This innovative system allows professionals and groups from various healthcare disciplines to work together seamlessly, ensuring that patients receive comprehensive and cohesive care. By enabling effective communication and information sharing in the Shared Cloud, the feature enhances the efficiency and effectiveness of community care, ultimately leading to improved patient outcomes and satisfaction.

Embrace the Future of Healthcare

YOUUNIVERSE

— HEALTH CLOUD —

Hospitalization

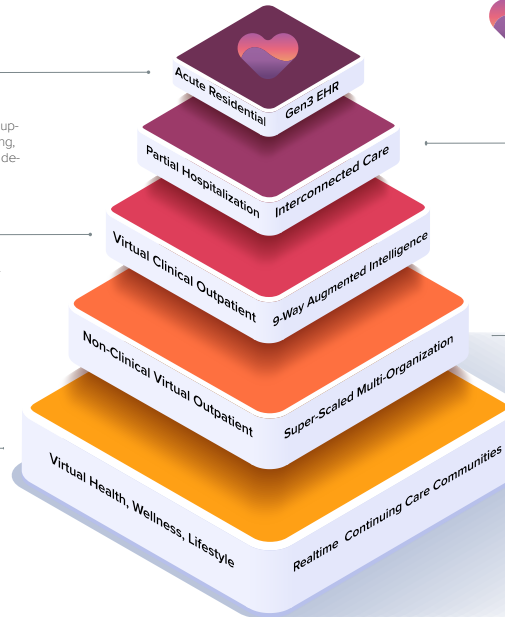

HealthIT & Digital Health workflow systems for intensive, round-the-clock medical and therapeutic care and workflow support for medication management, individual & group counseling, sessions with peers; family support groups; educational class delivery, analytics support, augmented intelligence and value-based payments accounting.

Outpatient/Virtual

The non-clinical virtual outpatient platform support for continuous support for patients with a variety of digital health feedback loops and connectivity to support teams, care providers, peers and coaching. This service provides an easy way for individuals to access the resources they need in order to manage their health without having to leave home or take time away from work.

Digital Communities

Build public or private communities supporting lifestyle, health and well-being programming to encourage positive changes in populations. A full featured digitally enabled virtual platform is available on any device including a workflows for clinical or non-clinical support teams.

Partial Hospitalization

Complete HealthIT and Digital Health support for intensive outpatient treatment program for mental health and substance use disorders. Comprehensive, multidisciplinary workflow technologies that includes individual therapy, group therapy, medication management and education delivery allowing patients to remain living at home during treatment or continue monitoring progress while attending work or school.

Virtual / Non-Clinical

Complete HealthIT and Digital Health support for a comprehensive range of online resources, such as telehealth, e-therapy and self-help tools. These services provide access to clinicians from virtually any location with an internet connection. They enable providers to quickly assess their patients' needs and develop individualized treatment plans that are tailored to each patient's unique circumstances.

The YOUUniverse Health Platform is not just a product; it's a catalyst for change in the healthcare system. With our innovative platform, we are empowering healthcare providers to deliver personalized care, manage risks effectively, focus on outcomes and quality, optimize financial performance, and embrace alternative payment models.

Together, we can help you shape a future where healthcare is accessible, efficient, and patient-centered. Tomorrow's healthcare innovation starts with YOUU.
